Education

Exp. Jul 2027 **Master of Information Technology (Thesis)**, *Monash University*, WAM: 85 | GPA: 3.8/4.0
Minor Thesis: Efficient Foundation Model Training over Heterogeneous Distributed GPU Resources
Teaching Associate: FIT1050 Web Fundamentals, FIT3178 iOS Development (Feb 2026 – Present)

Jun 2023 **B.E. Information Technology**, *Panjab University*, GPA: 9.08/10 | Ranked 2nd of 64

Experience

Nov 2025 – Feb 2026 **Monash University**, *Research Software Engineer Intern (Summer Internship Scholar)*, Melbourne

- Developed a **real-time energy analytics** platform that ingests building consumption data via Apache Kafka and renders it as 3D visualisations broken down by usage category (Next.js, TypeScript)
- Built **MapLink**, a map-based freelance marketplace with a multi-stage job state machine, backed by Python REST APIs and JWT authentication (FastAPI, Mapbox API, Next.js, Stripe Payments)

Dec 2025 – Feb 2026 **Nudge (Antler Launchpad)**, *Software Engineer, Contract*, Melbourne

- Shipped an iOS MVP for an AI budgeting app to **200 beta testers** in **under 1 month**; the product was accepted into **Antler Launchpad** and covered by Monash IT News (Swift, SwiftUI)
- Built an **app-blocking** feature that shields spending-prone apps from opening to interrupt impulse purchases (Screen Time API: FamilyControls, ManagedSettings)
- Integrated the **OpenAI API** to analyse spending patterns and generate budget recommendations and alerts, served by backend services on AWS (Python, FastAPI, AWS EC2)

Jan 2023 – Jul 2025 **Josh Technology Group**, *Software Engineer*, Gurugram, India

- Delivered features across **3 enterprise products** serving **50K+ US users** (React, Angular, Next.js, Django, .NET)
- Rebuilt a legacy XML/HTML resume service as a **serverless microservice**, improving PDF generation speed by **40%** across **10K+ documents/month** by moving rendering off the frontend
- Led a **zero-downtime migration** of critical JavaScript codebases between repositories, reducing CI/CD release delays by **35%** after validating the approach on a single service
- Ran production deployments across **10+ services**, including Next.js frontends, backend APIs, databases and different microservices.
- Resolved **30%+ of P0 production incidents** for LINQ by debugging C#/.NET services, profiling memory usage and slow database calls, and validating fixes with Sentry
- Co-developed shared frontend libraries as **private npm packages** (Redux state, component testing, MJML email) adopted by **5 teams**, cutting campaign delivery time by **60%**
- Mentored **3 junior engineers**, conducted **20+ technical interviews**, and ran sprint planning across an 8-person team

Jul 2022 – Oct 2022 **Salt (Y Combinator W22)**, *Software Engineer Intern*, Bengaluru, India

- Built a document-automation product across the stack, from the frontend to a Python OCR backend that converts submitted forms into structured documents, cutting manual processing by **50%** across **1K+ daily transactions** (React, Python)
- Developed a **drag-and-drop form builder** and a Google Drive-style document-generation interface (React, Material-UI)

Projects

2026 **Aussie EcoLens**, *Personal Project*, Live App

- Built a **multi-cloud serverless** wildlife platform on AWS and GCP that auto-tags uploaded images and videos with Australian species using an ML detection pipeline (MegaDetector, SpeciesNet)
- Owned the **AWS infrastructure**, React frontend, and auth flow (Cognito, JWT-authorised API Gateway, Lambda, S3, DynamoDB)

GeoPins, *Personal Project*

- Built a **real-time** map app for pinning and sharing locations via GraphQL Subscriptions (React, Apollo, MongoDB, OAuth)

Skills

Languages TypeScript, JavaScript, Python, C#, Swift, SQL
Frameworks React, Redux, Next.js, Node.js, GraphQL, Angular, Django, FastAPI, .NET, SwiftUI
Data & Cloud Apache Kafka, PostgreSQL, MongoDB, AWS, GCP, Docker, Git, Sentry
